

NATUS

RELICUS

Angélica G. De La Vega Concepción
Nicole Hsiao Sánchez

Introduction

Fifty years later, in 2067 , the world was transformed by technology. The population size of the world grew by two billion, and people were forced to take refuge into larger countries. The effects of the growth of the population caused more diseases, excessive energy consumption, and overall human ignorance caused the rise of global warming. Most of the animals extinguished and now people depended on lab grown animals for food, which are best grown in **Natus Relicus** and later traded around the world.

History

When the world began to physically transform itself, as result of global warming and technological advances, most countries began to collapse consequently. Disputes between governments caused many trade treaties and government policies to dissolve, as there were no longer conflicts about petroleum, and other traded goods because they became exhausted. As a result, new governments emerged, and a group of scientists and modern politicians united to form what was becoming a new type of a liberal democracy, which founded its values on modern technology rather than human interactions.

Flag

Red-orange: color between orange and red, therefore representing balance, enthusiasm, and success.

Yellow lightbulb: represents the technological boom of this era.

Mint Graph: change in human interactions

Absolute and Relative Locations

- 61.5240° N, 105.3188° E
- Located in both the northern and eastern hemispheres, Natus Relicus borders the Arctic and the Pacific Ocean.
- It also borders Azerbaijan, Belarus, China, Estonia, Finland, Georgia, Kazakhstan, North Korea, Latvia, Lithuania, Mongolia, Norway, Poland, and Ukraine.
- Capital: Civitas Lumine

Important Geographical Features

- Largest country in the world
- Occupies one-tenth of all the land on Earth
- It spans 11 time zones across two continents
- Has coasts on three oceans (the Atlantic, Pacific, and Arctic).
- Is the home of Gigantiki, the largest mountain range in the world.

Climate

The country has different types of climates, depending on the region, such as: desert, semi arid, humid continental (cold), tundra and subarctic. The majority of the territory has a subarctic climate.

Population

- Origins: English, Spanish, Portuguese, Italian and African
- Ethnicity: Mixed
- Average Age: 70 years
- Gender Composition: 6 males in every 10 people
- Population size: 200,000,000

Population

Anglatine:

1. **Hominople:** People
2. **Amorove:** Love
3. **Pecuney:** Money
4. **Domusly:** Family
5. **Gention:** Nation
6. **Cietyatis:** Society
7. **Raenat:** Nature
8. **Jofficium:** Job
9. **Cogink:** Think
10. **Tempime:** Time

Technianity

- In the nation, 90% of the population is a practitioner of Technianity, a religion that adores smartphones just as much as televisions or computers. However, church and state are separated.
- Technological devices are worshipped by those who believe that technology is the answer to humanity's problem: the "members of the Church of Technianity."
- They pray for the creation of more technological inventions, but there is no actual institution for this religion. It is practiced individually, only with the presence of a technological device.

Culture

- The music both produced and listened to in the country is mostly electronic music. There is a relatively small quantity of music produced by electromechanical means, such as with a violin or drums. Synthesized melodies roam the streets and the homes of the nation.
- In the museums of the nation, paintings and drawings are no longer traditional. They are digital paintings or 3D as well as 4D sculptures.
- Families celebrate the Robo Rite every birthday of their offsprings until they reach the age of 21. In it, sons and daughters receive an upgrade to their personal robot.

Type of Government and Basic Government Structure

The government is characterized as a liberal democracy, and although the President mainly represents Natus Relicus, the President and the Prime Minister share many responsibilities such as passing laws, signing treaties, communicating the countries message, and representing the country in International affairs.

Liberal Democracy:

- Accountable government to the people
- Free and fair elections
- Peaceful orderly transfer of power from one government to the next
- Information is freely available to the citizens
- Protections for rights and liberties
- Toleration of diverse beliefs, opinions, cultures, and lifestyles

How Laws Are Made

- Every year a caucus is made to review the utility and use of each law, as many become outdated by technology.
- A bill is introduced to the house of Congress to be voted on.
- If the bill passes one body of Congress, it is then presented to the other body to go through a similar process to be proposed, discussed and voted on.
- Once both bodies vote to accept a bill, it is presented to the President and Prime Minister.
- The President and Prime Minister then considers the bill, and sign them or vetoes them.

Money

In 2067, all the currency is reflected technologically and there is neither hard paper nor coins. To keep the monetary value of each country, the technological platform translates the different currencies and automatically uses it as one. This system is called Money Translate and it features all types of currencies. The Natus Relicus currency is worth .90 cents of every american dollar.

Type of Agriculture

In this highly industrialized nation, artificial food is the only source of food people ingest. As a result, agricultural products arise from the technological advances. Therefore, these advances have not only caused citizens to digest chemically engineered foods, but also they have caused a reduction of jobs in the agriculture department.

Type of industry

- Natus Relicus is a highly technological nation, which consumes a huge amount of energy to produce innovative products. As a result, the most imported products in the country are natural gas and coal.
- The high-tech exports of the country include products of the following industries: aerospace, computer, pharmaceutical, scientific instruments, lab animal breeding, and electrical machinery.
- All the nonrenewable resources (Fossil fuels like coal, oil, and gas) are imported.

Military Assets

- Human soldiers have been replaced by robots. Humanoid robots, which are considered fully autonomous robots, are the only members in the country's military.
- Other robotic systems, such as unmanned aerial vehicles (drones), have made fighter jets obsolete. Strong artificial intelligence dominates the military of Natus Relicus, a nation that no longer has a need for human military soldiers.

Constitution

- The Constitution of Natus Relicus was adopted in 2021.
- It acknowledges the existence of Congress and guarantees the protection of the rights of the people.
- It states that the country will always “strive to promote technological progress.” Furthermore, it stipulates that the country is a liberal democracy, which will always secure the power of the people.

We, the people of Natus Relicus, through our elected representatives in Congress, determined that we will secure for ourselves the protection of rights and liberties. We, the people of Natus Relicus, proclaim that sovereign power resides both within the people and this Constitution. We, the people of Natus Relicus, believe that the government is a sacred trust of the people, and that our country will always strive to promote technological progress. We, the people of Natus Relicus, acknowledge that this Constitution is founded with the principle of securing the power of the people in our liberal democracy. We, the people of Natus Relicus, will be seekers of peace and justice domestically and within the international community. We, the people of Natus Relicus, believe in the right to live in peace and with freedom, if the universal laws of political morality are respected. We, the people of Natus Relicus, pledge our national honor to accomplish the ideals presented in this Constitution, with all our resources.

World organizations or Treaties

- ***Liberal Hacker's Treaty***: Was signed in 2021 by United Technologies to ensure that no country hacks into the system of their counterparts.
- ***Moon Base Powers Treaty***: Was signed in 2034 to ensure that the eight world powers receive equal territory of the moon for military bases.
- ***Physical Education Treaty***: Since technology became so advanced, schools started to close and children began learning on their own. This treaty ensures the right for kids to receive a physical, classroom worthy education twice a week for them not to lose human interactions.
- ***National Hunger Robots (NHR)***: Is a world organization founded by the eight super powers and supported by United Technologies, which install robots that produce food in places of massive poverty.
